Subject: Follow-up on a couple of dates

ARSG MEETINGS:

I spoke with Peter Butler, ARSG this afternoon about the April & May ARSG meetings. Here is what he was thinking about – I expect that he will finalize and let us know fairly soon.

April 28th ARSG Meeting: This meeting will have 2 sessions to it – a more “detailed” meeting in the afternoon – probably starting @ 1:00 or 2:00 pm. Likely will break ~ 5:00 pm. And then an evening meeting that would be intended for the general community starting probably ~6:30 or 7:00 pm.

Peter has several items for the afternoon agenda:

- Discussion of the 2015 sampling program – Dan is sending him the table with the sampling locations and a location map.
- Update of data from the USGS stream gages – Peter is updating his database and will have something on this.
- Draft BERA – Dan will prepare and present a detailed power point on the BERA for the afternoon session.
- Presentation by SGC on the Tailing Impoundment Reclamation – Peter said he has suggested this to Larry Perino but Larry hasn't committed to this yet.

The evening session will have a presentation by Dan of the findings of the BERA that is less detailed and more appropriate for the general public. I don't think there will be any other items on the agenda for the evening meeting.

May ARSG Meeting: I told him that there were a few of us that were registered to attend the San Juan Watershed conference in Telluride on May 28-29th and asked when/if he was planning on a May meeting. He indicated that he thought they would be having one since Steve Way agreed to give a presentation on the planned work for the Red/Bonita. As we talked about when to have the meeting, he seemed to be leaning towards having that meeting on Wednesday, May 27th instead of Tuesday, May 26th – which would be the day after Memorial Day. That would be better for those of us who would be going over to Telluride afterwards. He said he would get back to me soon about which day the meeting would be.

I'll keep you posted on what I hear from Peter.
